

Peer-to-Peer Rental Marketplace

Objectives

- Build an Airbnb-style marketplace for renting everyday gadgets and tools between individuals.
- Implement a calendar-based booking system preventing double-bookings.
- Integrate secure payments with hold/release logic protecting both parties.
- Create a review system with a dispute resolution workflow for damaged or missing items.

Deliverables

- A fully functional peer-to-peer rental web application.
- Listing creation with item photos, description, daily rate, and availability calendar.
- Booking flow with date selection, total cost preview, and Stripe payment hold.
- Two-sided review system capturing renter and owner feedback after each rental.
- Dispute resolution workflow routing claims to an admin mediator with evidence upload.

Requirements

- Frontend: React.js with a date range picker and real-time availability calendar.
- Backend: Node.js/Express REST API with booking conflict detection logic.
- Payments: Stripe payment intents with manual capture releasing funds after return.
- Notifications: Email and SMS alerts for booking requests, confirmations, and returns.
- Database: PostgreSQL with date range overlap queries preventing double- bookings.

Advanced Features

- Calendar Booking: Real-time availability display blocking booked and buffer dates.
- Secure Payments: Stripe hold-and-release protecting funds until item is returned safely.

- Review System: Post-rental prompts for both parties with star ratings and text reviews.
 - Dispute Resolution: Structured claim form with photo evidence upload routed to admin panel.
 - ID Verification: Stripe Identity integration for renter identity verification on high- value items.
 - Insurance Options: Optional damage protection add-on at checkout powered by third-party API.
 - Wishlist & Alerts: Users save items and get notified when unavailable items become free.
-
- Category Browsing: Organized categories (electronics, tools, sports, events) with faceted filters.
 - Repeat Rental Discounts: Owner-set discounts for weekly or monthly rental commitments.
 - Mobile Responsiveness: Full booking and listing management experience on mobile devices.
 - Security Deposit Hold: Automatically hold a configurable security deposit and release it after item return.
 - Damage Charge: Allow owners to raise a damage claim charged to the renter's saved payment method post-rental.

Earnings Dashboard: Give owners a real-time breakdown of gross rental income, platform fees, and net payouts.
